Documentation

Thank you for buying our product, you are the real MVP 🎉🎉🎉

Installation

1. Unzip the source code to your preffered directory

2. Run **flutter pub get** to install the dependencies

3. Change directory to the ios folder, and run **pod install** to install the Podfile dependencies

4. Run **flutter run** to run on your preffered device

5. To change your blog domain/URL, open **lib/config/app.dart** and change the appDomain to yours

Setting up Admob

1. Edit the **AndroidManifest.xml** file at **android/app/src/main/AndroidManifest.xml** on line 48 you will see **YOUR_APPLICATION_ID** replace it with application ID you got from Admob.

2. For your Ad Units, open **lib/config/modules.dart** and change for both android and ios

3. To change the **Application ID** for iOS, you will need to open **ios/Runner/Info.plist** and scroll to **GADApplicationIdentifier** key and change the value to your ID

Setting up Push Notification

1. You will need an Application ID you got from **Onesignal** website, open **lib/config/modules.dart** and change the ONESIGNAL_APP_ID to yours

2. If you run into any issue, please refer to their official documentation here:
   https://documentation.onesignal.com/docs/flutter-sdk-setup
